## DETAILED ACTION

### *Specification*

1. A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The substitute specification filed must be accompanied by a statement that it contains no new matter. The application appears to be a literal translation of the foreign application.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Govindan.

Govindan discloses a method for spray coating aqueous paint, characterized in a portion of a spray gun is cooled or heated to adjust a temperature of aqueous paint passing through the spray gun. Govindan provides a shroud 12 that surrounds the outside nozzle portion 3 of the spray gun. Air passing through the shroud is heated to a temperature of 15°–95°C thus heating the nozzle portion and the aqueous paint passing through the nozzle (see column 2, lines 37-45 and lines 63-68).

As to claim 3 and the limitation that the temperature of the paint is controlled and is within a range satisfying the recited equation. Since Govindan discloses that the temperature of air and thus the paint is held within a range of 15-95 C and the humidity is held at about 0 to 30,

which are within the recited ranges of X and Y, it is deemed that the equation will be satisfied by Govindan's device.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Blackinton shows a painting device in which the spray nozzle is shrouded and heated to a controlled temperature. Rosenberger et al. and Ishino show devices in the general state of the art of the invention.
